

*Please note that these guidelines are subject to change.*

## GENERAL INFORMATION

- PaleorXiv accepts all types of manuscript, including but not limited to systematic reviews, hypotheses, 'negative' results, and data and methods papers.
- We publish two major types of article:
  - Preprints of articles in parallel to traditional journal submissions.
  - Previously published articles that you wish to make Open Access.
- Please check the [Journal Policies](#) page for further details on self-archiving options.
- We encourage submissions from all domains of Paleontology and Paleobiology, including, but not limited to: Vertebrate paleontology; Invertebrate paleontology; Micropaleontology; Paleobotany; Paleoecology; Paleoclimatology; Paleogeography; Paleoceanography; Paleohistology; Paleobiogeography; and Biostratigraphy.
- We do not accept letters or blog posts, or those which do not pass the normal community standards for submission.
- Note that preprint publication does not replace publishing with journals, and we recommend authors to use the [SHERPA/RoMEO](#) service to check journal preprint policies. A Paleontology-specific and revised version of this database is maintained [here](#).

## YOUR SUBMISSIONS

- All submissions will go through a basic screening process to check for conformation with these guidelines.
- Submissions that do not meet these guidelines will be removed, and the authors notified.
- Please make sure that all co-authors are aware of, and have agreed to, submission. They will be notified upon submission of preprints.
- Before submitting, it is recommended to add a note to the front page stating "This is a preprint that has been submitted to journal XXX" where applicable. When updating to the postprint or accepted author manuscript, please change to "This is a postprint that has been peer reviewed and accepted at journal XXX." A template for this is available [here](#).
- All preprints can be updated with the postprint version or author-accepted manuscript. Please check for journal compliance and embargo periods where needed.

## USING PALEORXIV ARTICLES

- Please note that preprints are not formally peer reviewed. When re-using them, and especially when citing, this status should be clearly marked.
- Please exercise the same care and judgment you would use for any research output when it comes to the re-use of preprints.
- We strongly encourage community interaction through commenting and sharing of preprints.

## TAXONOMIC SUBMISSIONS

- When submitting taxonomic papers that identify new genera or species, please omit the name and replace with 'gen et. sp. nov.', as appropriate.
- For newly named higher level taxa, recombinations, referrals, synonymisations, and phylogenetic definitions, we strongly advise that these be fully redacted too prior to submission.
- For manuscripts that include a lot of taxonomic and systematic work, authors are advised to carefully consider the taxonomic implications before publishing.

For more information, please contact us [here](#).
